

not slow after

first call for the

cache facility

data in

thought about doing

more caching but not

sure there's enough

demand to do this w monitoring plans - look

at usage to see what to

cache

Emissions call

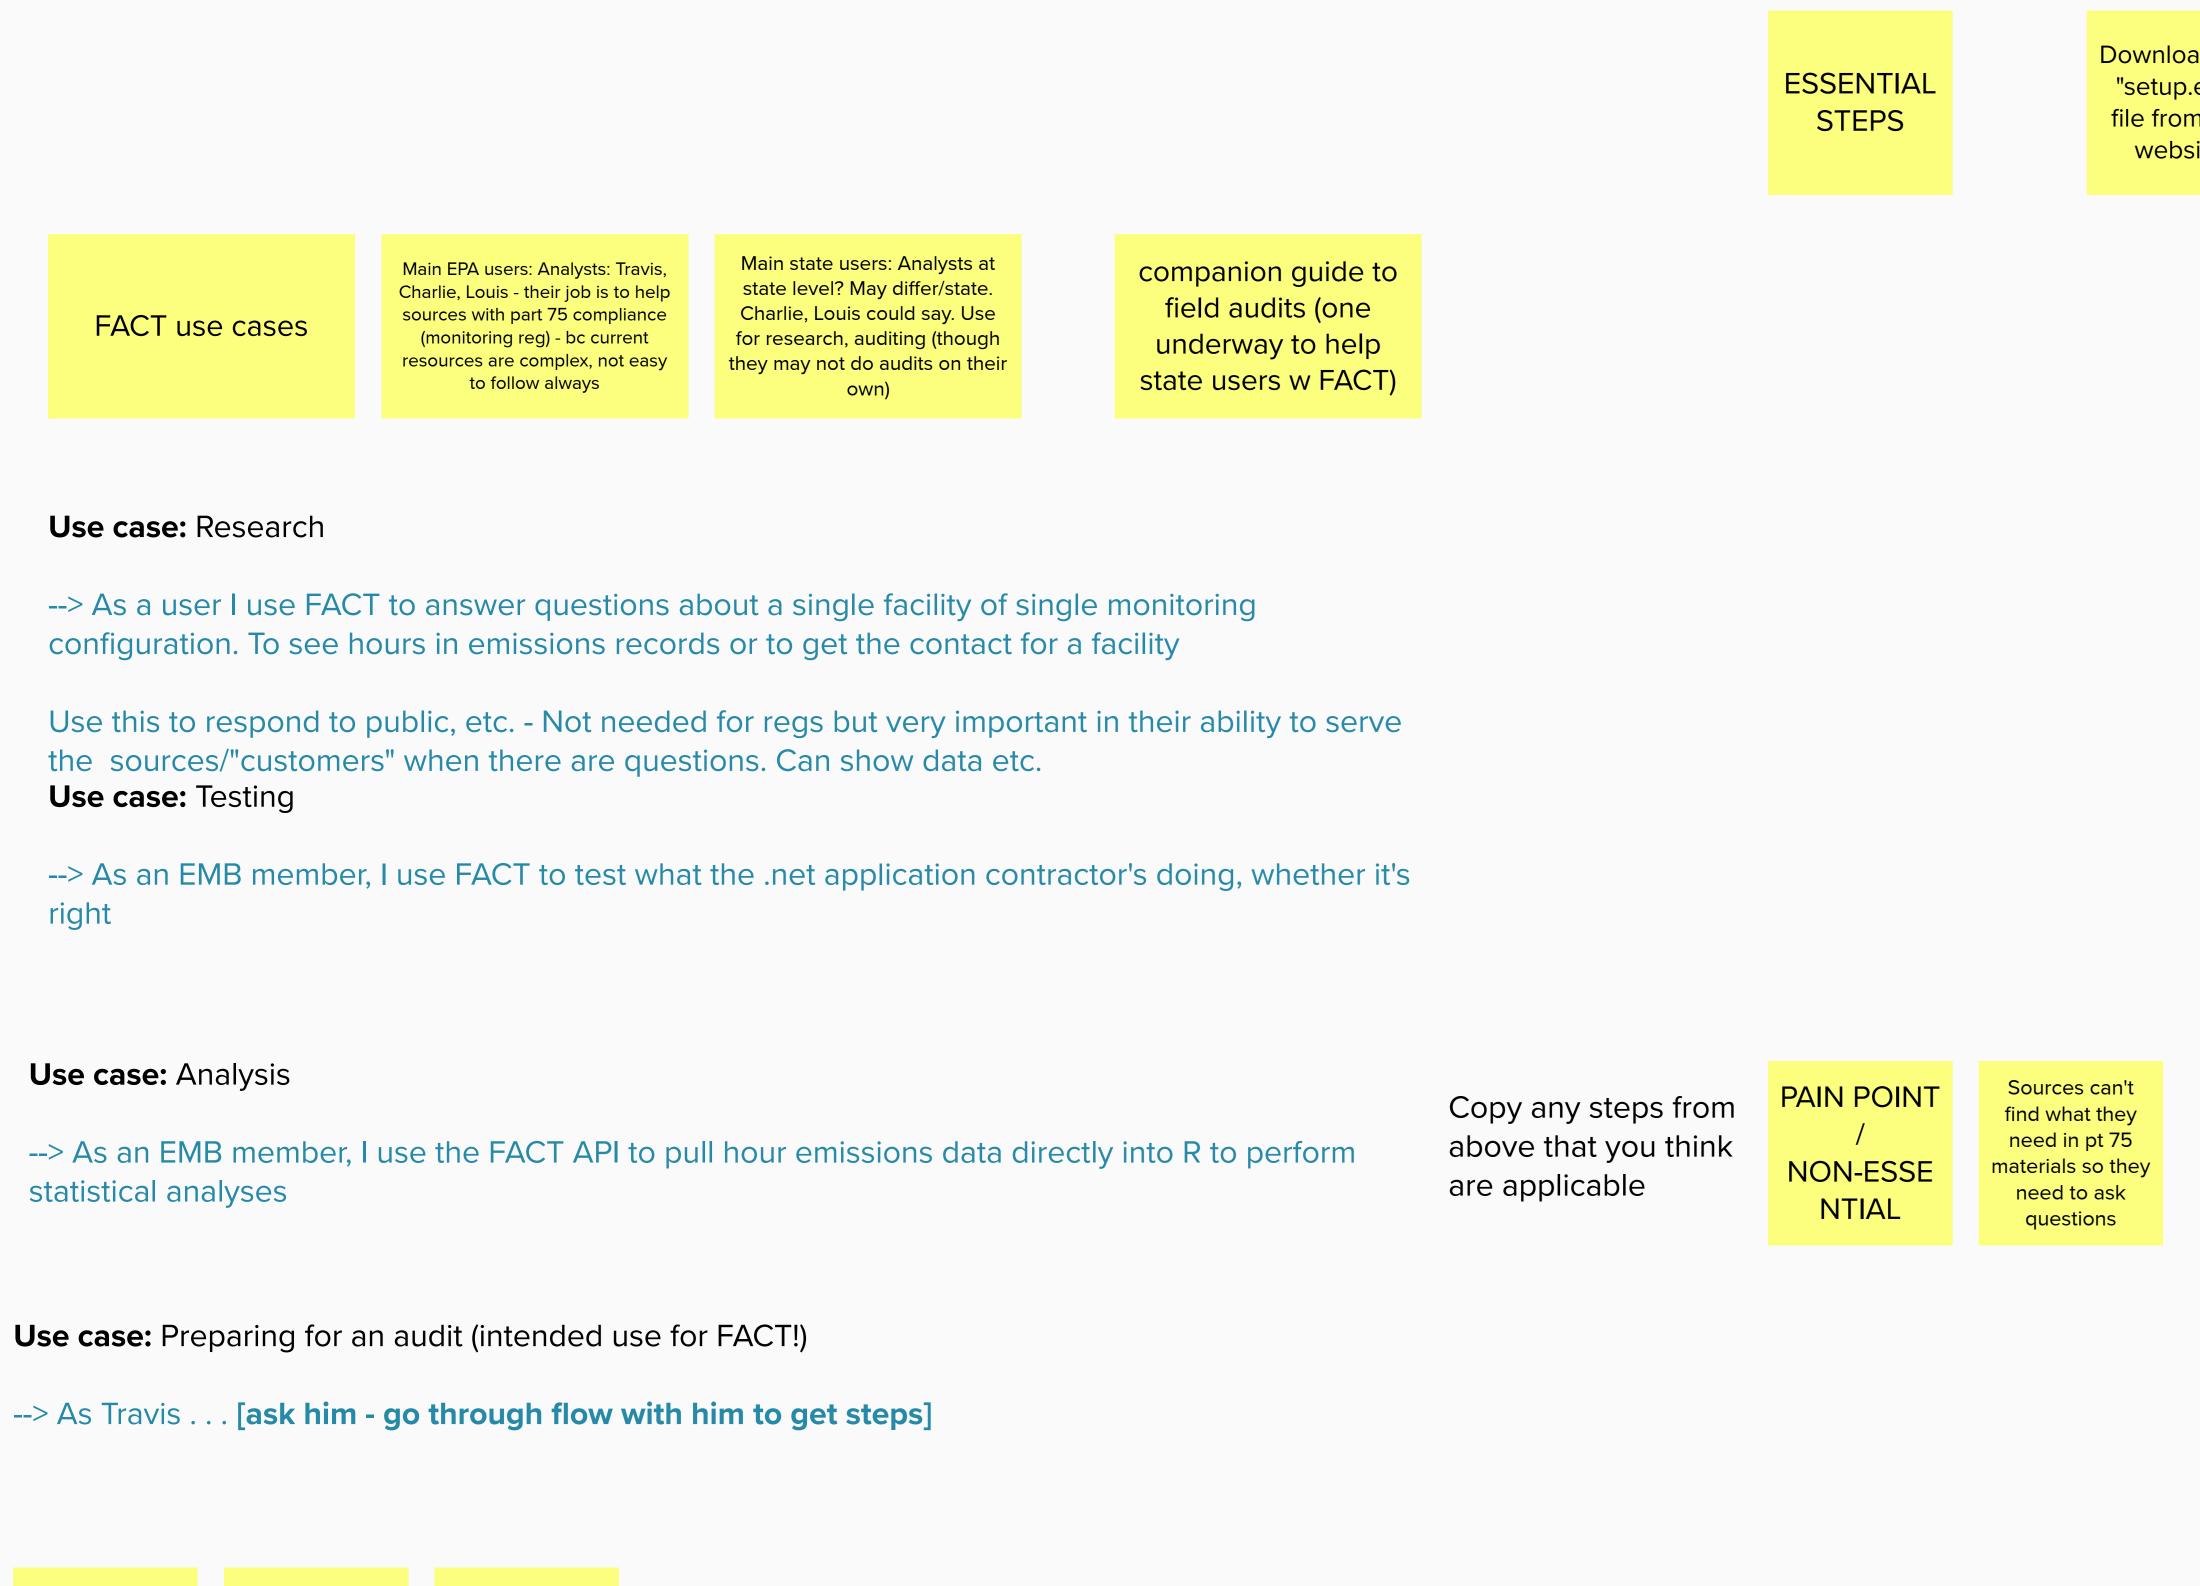

can't do anything

other than view

or export data (to

excel for

analysis)

What if, they didn't

queries bc the CAMD suite could pull data for different uses?

For instance, being able to filter units by a specific characteristic (primary fuel, pollution control device, etc.)
